Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6,761,049 to Nitschmann et al. in view of US Patent 5,860,300 to Valent.
3. Nitschmann et al. teaches a sealing assembly for household appliances such as washing machines comprising door frame 3, door glass 2, frame cover 7 with an entrance hole for receiving frame 3, sealing member 10 comprising small and large diameter parts to create a space where rolled inner end 8 of cover 7 is held and tip 4 being in contact with frame 3 and lip 5 being in contact with glass 2 when door 1 is closed, and bar 11 for pressing the sealing member against inner end 8. Note column 3, lines 47-63 and Figures 1 and 2. Nitschmann et al. does not detail the manner in which sealing member 10 is positioned in relation to a front support for supporting a drum in the washing machine. Valent teaches a similar washing machine sealing device 12 coupled between a door frame 1 and a drum support 10. Note column 2, lines 47-61 and Figure 4. Since Nitschmann et al. teaches his sealing device being used in a conventional washing machine and Valent teaches that it is conventional to couple a door and a support for a drum with a sealing device, it would have been

Art Unit: 3749

obvious to one of ordinary skill in the art to couple the door and seal of Nitschmann et al. with the drum support of Valent.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kronbetter et al. and Cerruti et al. teach similar sealing devices.
